Figure 2.1 : Spatial Distribution of Monitoring Stations in the Network	4

The Network comprises 23 automatic air quality monitoring stations (see Figure 2.1) across the PRD region. Ten city stations are operated either by the Environmental Monitoring Centres of the individual cities in Guangdong or the operation-cum-maintenance agencies commissioned by the State. Eight regional stations are operated by the GDEMC, the four stations located in Hong Kong are managed by the HKEPD and the remaining one in Macao is operated by Meteorological and Geophysical Bureau of Macao SARG.

All stations are installed with monitoring equipment to measure the ambient concentrations of PM₁₀, PM_{2.5}, SO₂, NO₂, O₃ and CO.

Annexes A and B show the site information of the monitoring stations in the Network and the methods used for measuring air pollutant concentrations respectively.

Figure 2.1 : Spatial Distribution of Monitoring Stations in the Network

Remark: For the boundary of the administrative division of the Macao Special Administrative Region, according to the Decree n.º665 of the State Council of the People’s Republic of China, “the map of the administrative division of the Macao Special Administrative Region” was approved at the 116th Executive Meeting of the State Council on 16 December 2015.

3. Operation of the Network

Owing to the relocation of the Modiesha monitoring station in Guangzhou, the station has been temporarily suspended from 31 March 2020 onwards. In addition, owing to the in-site relocation of the Zhudong monitoring station in Guangzhou and Duanfen monitoring station in Jiangmen, the operations were suspended from 2 July to 3 August 2020 and in early September 2020 discontinuously, respectively.

The overall operation of the Network was smooth in the third quarter of 2020. The average data capture rate of hourly air pollutant monitoring data measured at all monitoring stations

was 96.8% in the third quarter (Modiesha monitoring station and Zhudong monitoring station in July were excluded).

4. Statistical Results of Pollutant Concentrations

Tables 4.1a to 4.6b list the detailed statistical results of the six air pollutants (SO₂, NO₂, O₃, CO, PM₁₀ and PM_{2.5}) from July to September 2020. Per the amended *GB 3095-2012: Ambient Air Quality Standards*, starting from 2019, the concentrations of gaseous pollutants are calculated at a reference temperature of 298.15K and a pressure of 101.325 kPa, while the concentrations of PM₁₀ and PM_{2.5} are measured at real-time temperature and atmospheric pressure during monitoring.
